

## Problem Set 4 – Due Tuesday, February 7, 2012

**Problem 1.** Are the following statements true or false? Either prove the statement or give a simple counter-example.

- (a) If  $L \cup L'$  is regular then  $L$  and  $L'$  are regular.
- (b) If  $L^*$  is regular then  $L$  is regular.
- (c) If  $LL'$  is regular then  $L$  and  $L'$  are regular.
- (d) If  $L$  and  $L'$  agree on all but a finite number of strings, then one is regular iff the other is regular.
- (e) If  $R$  is regular,  $L$  is not regular, and  $L$  and  $R$  are disjoint, then  $L \cup R$  is not regular.

**Problem 2.** Define  $A = \{x \in \{a, b, \#\}^* : x \text{ contains an equal number of } a\text{'s and } b\text{'s or } x \text{ contains consecutive } \#\text{'s or consecutive letters}\}$ .

- (a) Can you use the pumping lemma to prove that  $A$  is not regular? Explain.
- (b) Prove that  $A$  is not regular.

**Problem 3.** Give a context free grammar for  $L = \{a^n b^m : n \neq 2m\}$ . Try to make your grammar unambiguous—and explain why it is unambiguous.

**Problem 4.** Consider the grammar  $G$  defined by  $S \rightarrow AA$ ,  $A \rightarrow AAA \mid bA \mid Ab \mid a$ .

- (a) Carefully and precisely describe the  $L(G)$  in an easy-to-recognize form.
- (b) Is  $L(G)$  regular? Prove your answer either way.
- (c) Is  $G$  ambiguous? Prove your answer either way.
- (d) Is  $L(G)$  inherently ambiguous? Give a convincing argument either way.

**Problem 5.** A *regular grammar* is a context-free grammar  $G = (V, \Sigma, R, S)$  in which every rule is of the form  $A \rightarrow \varepsilon$  or  $A \rightarrow aB$ , where  $a$  is a terminal and  $A$  and  $B$  are variables. Show that  $L$  is regular iff  $L$  is generated by a regular grammar.
